

Practical Application of Physical Security Criteria

Presented By:

Innovative Engineering Inc.

2014 Joint Engineer Training Symposium

Society of American Military Engineers

South Atlantic/South Central/Carolina

The Pinnacle of Structural Engineering

Seminar Overview

- **Innovative Engineering**
- **Background Information**
 - History of Terrorism
 - Risk Assessment (Asset Value, Threats & Vulnerability)
 - Risk Reduction
- **DoD Minimum Anti-Terrorism Standards for Buildings Unified Facilities Criteria (UFC 4-010-01)**
 - Criteria (Civil, Architectural, Structural and MEP)
 - New Tables & Graphics
 - Practical Application (Example Site Walk Thru)

Innovative Engineering Inc.

- **Structural Engineers**

- Commercial
- Government
- Industrial

- **Specialties**

- Physical Security
- Forensics

Physical Security

- **We Bridge the Gap**
- **Advanced Training**
 - Structural Dynamics
 - Specialized Training
- **Services**
 - Site Analysis
 - Blast Load Studies
 - Hardening (Blast Design)
 - Progressive Collapse
 - Peer Reviews

Forensics

- Condition Assessments
- Due Diligence Surveys
- Environmental Sampling
- **Façade Inspection**
- Failure Analysis
- **Post-Disaster Damage Assessments**
- **Sidewalk Vaults**

Today's Presenters

- **Scott L Weiland PE**
 - Education
 - BSCE **University of Michigan**
 - Graduate Studies:
 - San Jose State University
 - Georgia Institute of Technology
 - Anti-Terrorism/Force Protection Security Engineering: Applied Research Associates
 - Design of Blast Resistant Structures: Baker Risk
 - Blast Resistance for Anti-Terrorism: Protective Engineering Consultants
 - Registration: PE in 15 States + PR
 - Experience
 - 34 Years in Design and Construction
 - 20 Years in ATFP Security Engineering

Today's Presenters

- **Stephen L Morgan EI**
 - Education
 - BSCET, **Southern Polytechnic State University**
 - Blast Resistance for Anti-Terrorism: Protective Engineering Consultants
 - Registration: EI
 - Experience: 9 Years Security Engineering
 - Expertise
 - ATFP Peer Reviews
 - Blast Design
 - Progressive Collapse

Physical Security Consultant

- **Brian L Dance PE SE**

- Education

- BSCE **Brigham Young University**
- MSCE **Brigham Young University**
- Graduate Studies: Georgia Institute of Technology
- Design of Blast Resistant Structures: Baker Risk
- Blast Resistance for Anti-Terrorism: Protective Engineering Consultants

- Registrations: PE & SE

- Experience: 8 Years

- Expertise

- ATFP Peer Reviews
- Vehicle Barriers
- Blast Design
- Progressive Collapse

Background Information

- **Basic Definitions**
- **History of Terrorism**
- **Risk Assessment** (Asset Value, Threats & Vulnerability)
- **Risk Reduction**

Definitions - Graphical

- Explosive
- Hardening
- Standoff
- Threat

Source: FEMA 426

Progressive Collapse

“The spread of an initial local failure from building element to building element, eventually resulting in the collapse of an entire structure or a disproportionately large part of it.”

Source: UFC 4-010-01

Historical Perspective – Not New

- Historical references over **2000 years ago**.
- 1773, **Boston Tea Party** Lead to Revolutionary War
- 1914, Started **World War I**.
- Middle East in the 1950's
- Escalated after cold war in 80's & early 90's.
- Viewed as a Third World problem.

“Boston Tea Party”

Source: Luis Arcas Brauner

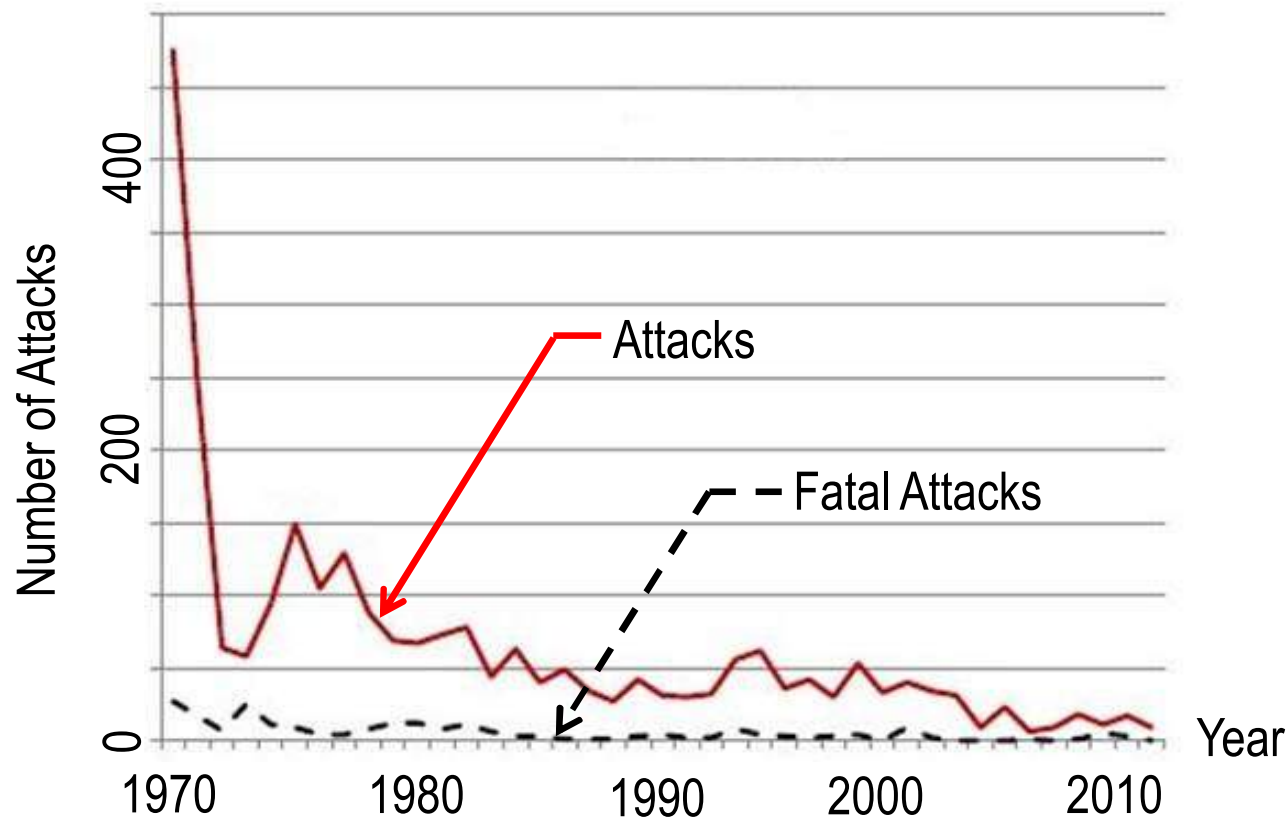

Historical Perspective - Recent

- 1978-1995 The Unabomber
- **1993-1st WTC Bombing**
- **1995-Oklahoma City Bombing**
- **1996-Centennial Olympic Park Bombing**
- **2001-2nd WTC Bombing**
- 2001-The Shoe Bomber
- **2001-Anthrax Attacks**
- 2002-The Beltway Sniper
- 2006-SUV Attack at UNC, Chapel Hill
- 2009-NYC Subway Plot
- 2009-Fort Hood
- 2009 Little Rock Recruiting Office
- 2009-Underwear Bombing Attempt
- 2010- Times Square Bombing Attempt
- **2013-Boston Marathon Bombing**

Attacks in US

Total and Fatal Attacks in the United States by Year, 1970 to 2011

- Attacks in US are declining despite global increase.

Source: IUSSD Terrorism Data, LaFree, Gary, Dugan & Miller

Terrorist Attacks Against US

- US accounts for only **7.8%** of terrorism worldwide.

Which Countries Are Targeted?

Percentage of Total Worldwide Targets, 1969 - 2009

Source: The Heritage Foundation, Muhlhausen & McNeil

US Casualties/Attack (2009-1969)

Source: The Heritage Foundation, Muhlhausen & McNeil

- However, attacks against the US tend to cause **more casualties/attack.**

Attacks against Military

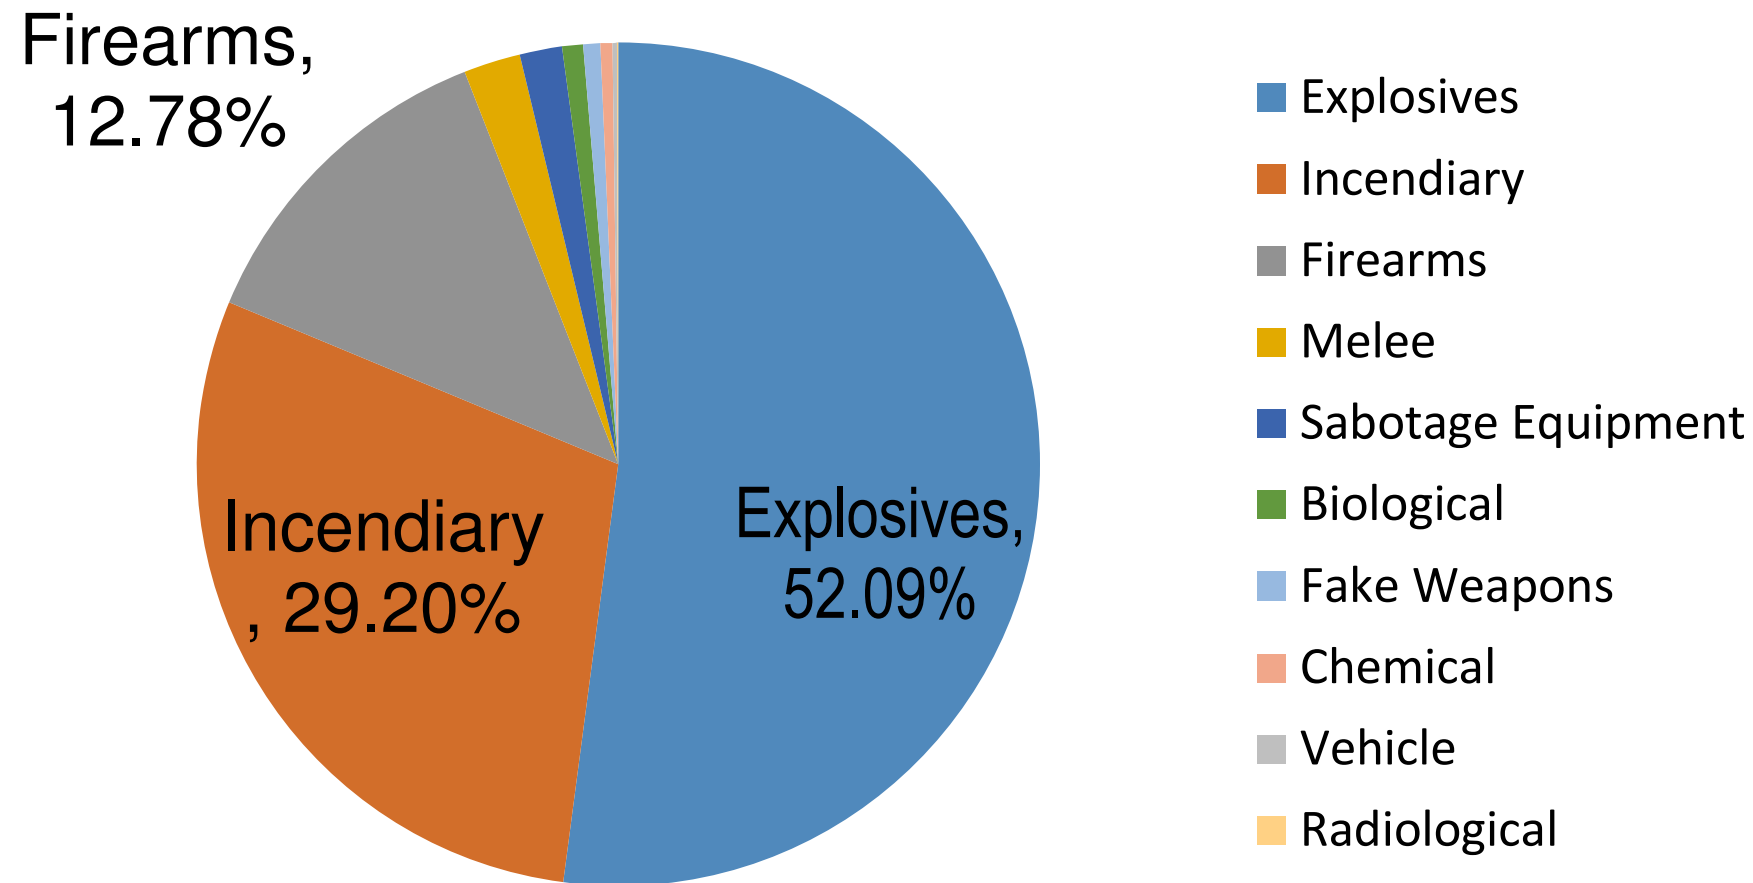

- 43% of all attacks against military institutions are leveled against the US.

Source: The Heritage Foundation, Muhlhausen & McNeil

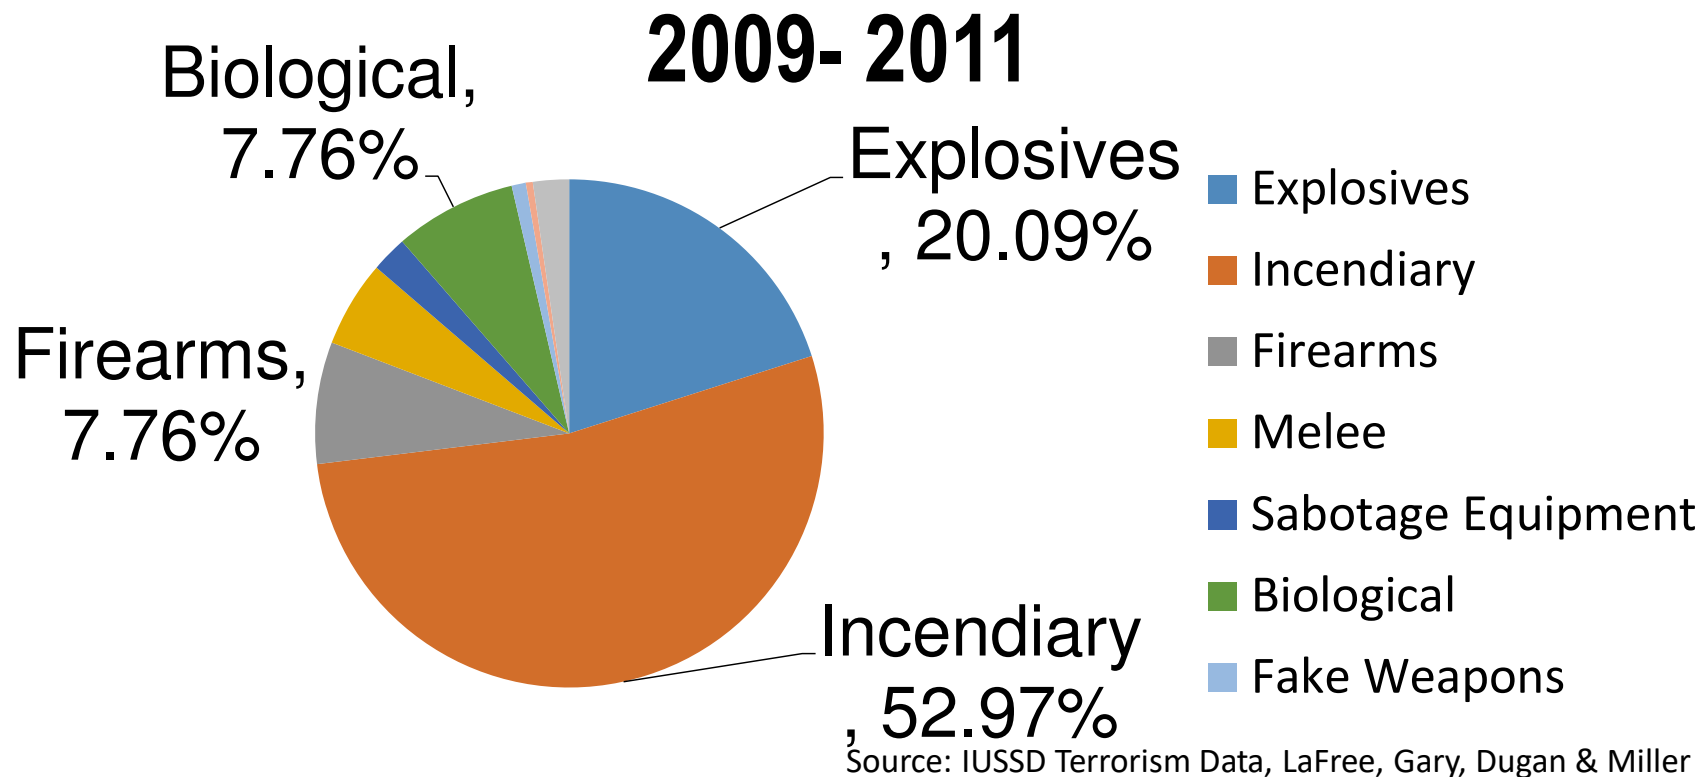

Weapons Used in U.S. Attacks

1970 - 2011

Source: IUSSD Terrorism Data, LaFree, Gary, Dugan & Miller

Weapon Trends in U.S. Attacks

- Less bombing and firearm attacks.
- More Improvised Incendiary Devices and biological attacks.
 - Improvised Incendiary Devices (IID) associated with environmental and animal rights violent extremist groups attacking property.
 - Increase in biological attacks is due to Anthrax Attacks in 2001.

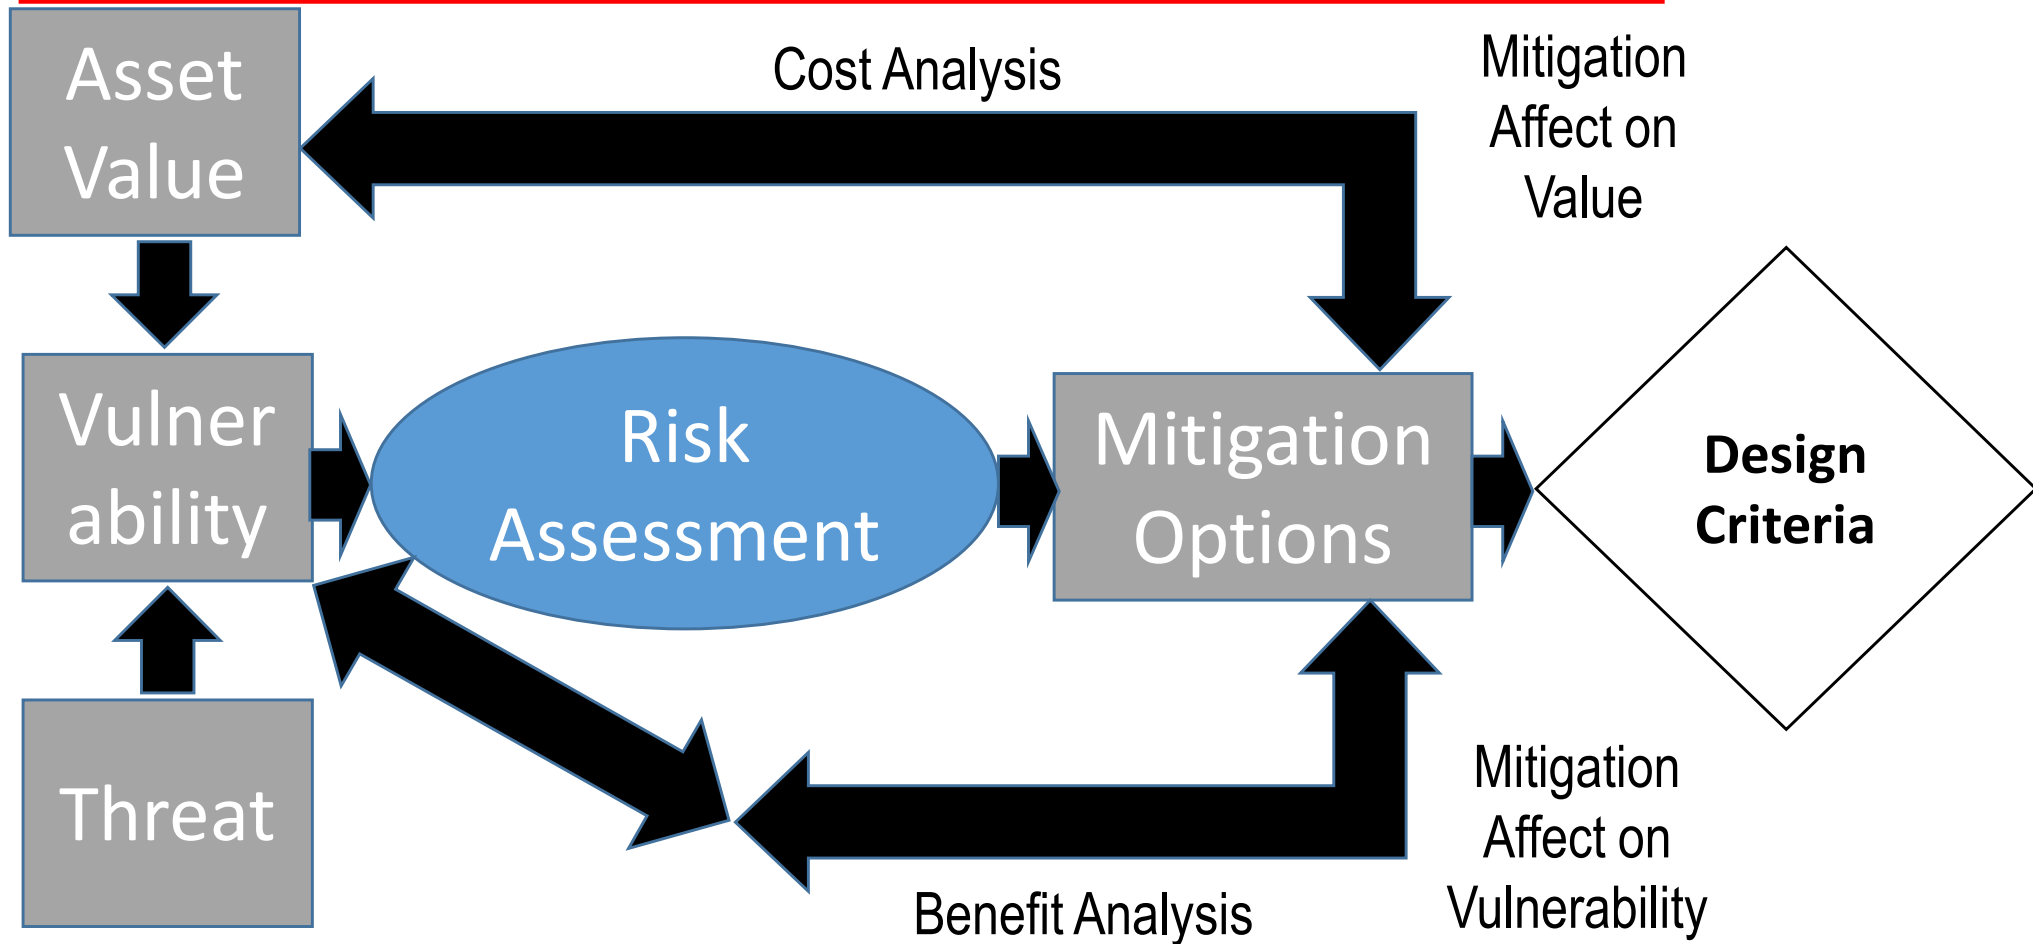

Risk Assessment Process

$$\text{Risk} = \text{Asset Value} \times \text{Threat Rating} \times \text{Vulnerability Rating}$$

Source: FEMA 426

Risk Assessment Process

$$\text{Risk} = \text{Asset Value} \times \text{Threat Rating} \times \text{Vulnerability Rating}$$

Source: FEMA 426

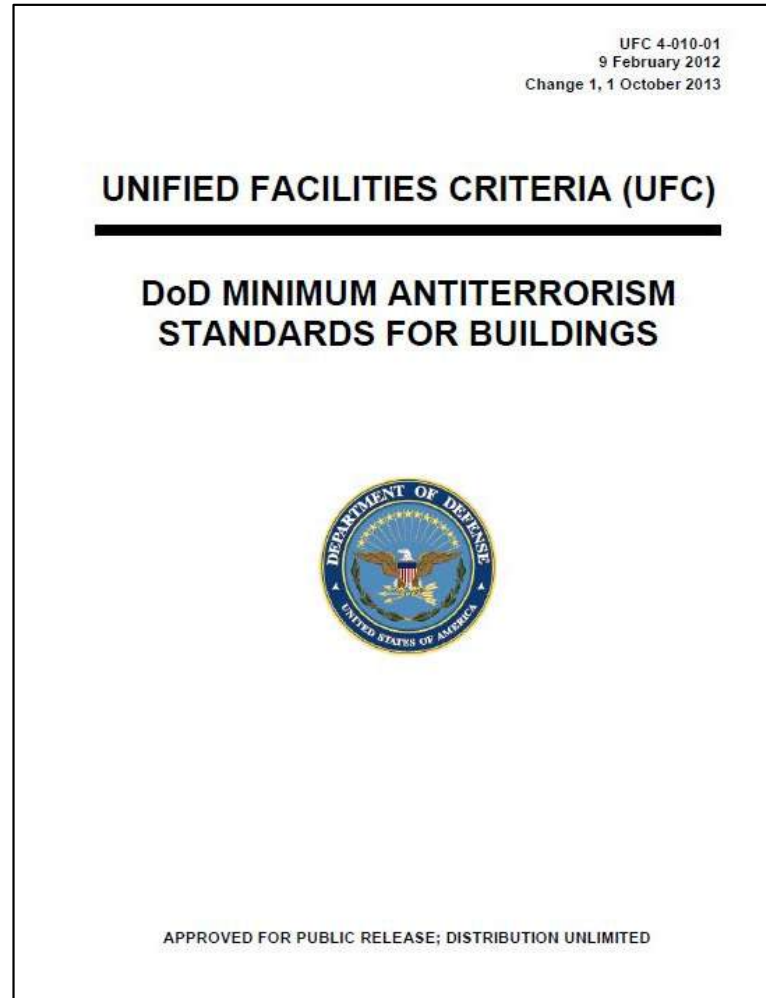

Risk Assessment Standard

- DoD Security Engineering Facilities Planning Manual,
UFC-4-020-01
 - Require Risk Analysis
 - Results in Design Criteria
 - May Reference FOUO Support Standards
 - Or DoD Minimum Antiterrorism Standards for Buildings,
UFC 4-010-01

Risk Reduction Criteria

- DoD Minimum Antiterrorism Standards for Buildings, **UFC 4-010-01**
 - Minimum Standards
 - Consider Installation Specific Threats

Risk Reduction Basics

Outer
Curtain Wall

Tower Drum Tower

Outer Gate

Inner
Ward

Inner Gate

Outer Ward

Inner Curtain
Wall

Moat

- **Concentric Levels of Protection**

- Progressively Reduces Threat

Explosive Threats

- Favorite tactic amongst terrorist
- Ingredients easily obtain
- Easy and quick to detonate
- Vehicles carry large quantities to doorstep.
- Dramatic effect
- Mass injuries and casualties

Murrah Federal Building

Yield (~TNT Equiv.)	4,000 lbs
Reflected Pressure	9,600 psi
Standoff	15 ft
Killed	166

Source: FEMA

Blast Theory

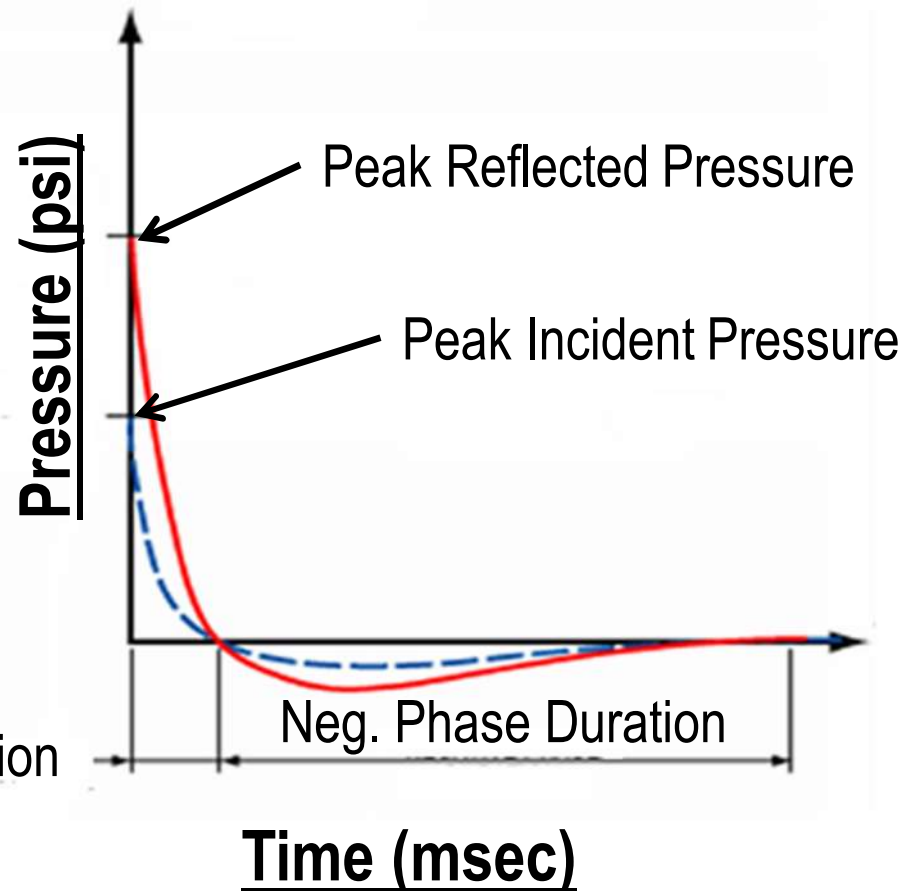

- Supersonic pressure wave caused by detonation
- Similar to water wave including reflections and refractions and reformation

Blast Theory

- Produces tremendous pressures (e.g. > 4 psi, 576 psf) in a short amount of time, milliseconds.
- Produces a small amount of wind ahead of and behind the pressure wave.
- As pressure wave impinges on surface in its path, the pressure buildup, reflected pressure, can be almost 13 times the incident free field pressure wave.

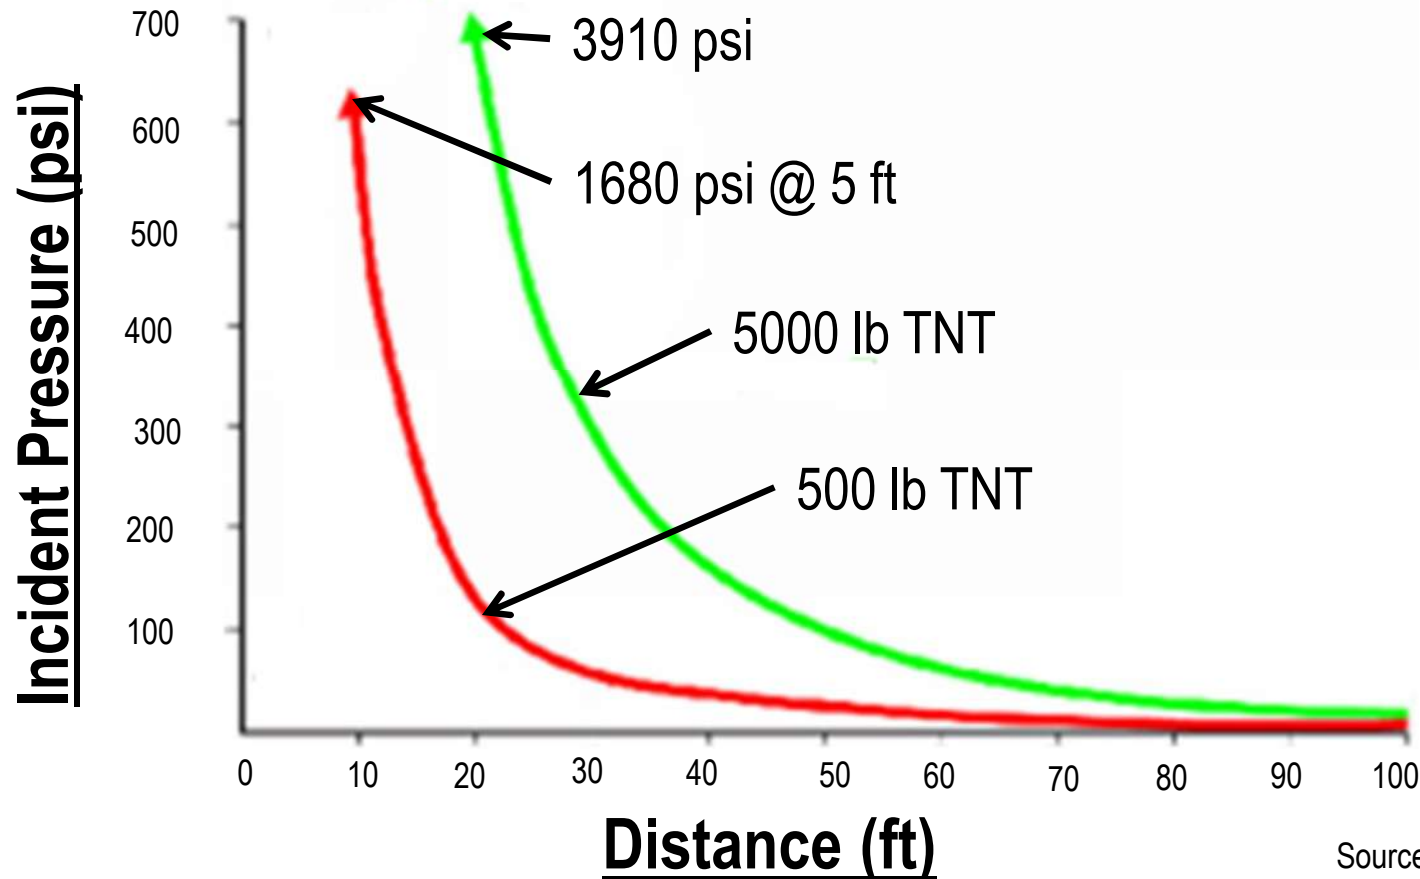

Blast Theory

Source: FEMA 427

- Pressures decay exponentially with time.
- Dynamic, non-linear, time history analysis.

Blast Theory

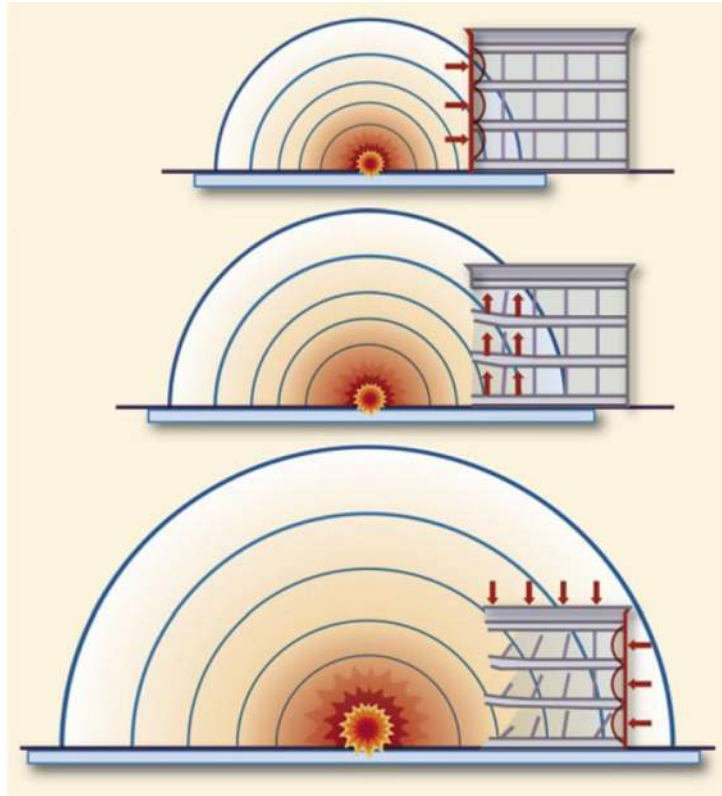

- Pressures decay with the cube of the distance from the explosion.

Blast Theory – Vehicle Bomb

Envelope Failure

Upward Force
on Floors

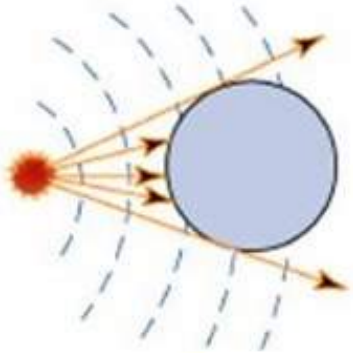

Blast Wave
Surrounds
Building

Source: FEMA 427

- Blast breaks windows, lifts floors, fails columns.
- Note positive pressure on all sides of buildings.
- Pressure wave diffracts around object and reforms on the other side.
- Pressures determined by nomograph (Kingery & Bulmash)

Shapes That Affect Blast

Round Shape

Blast Wall

Re-entrant corners

Berm

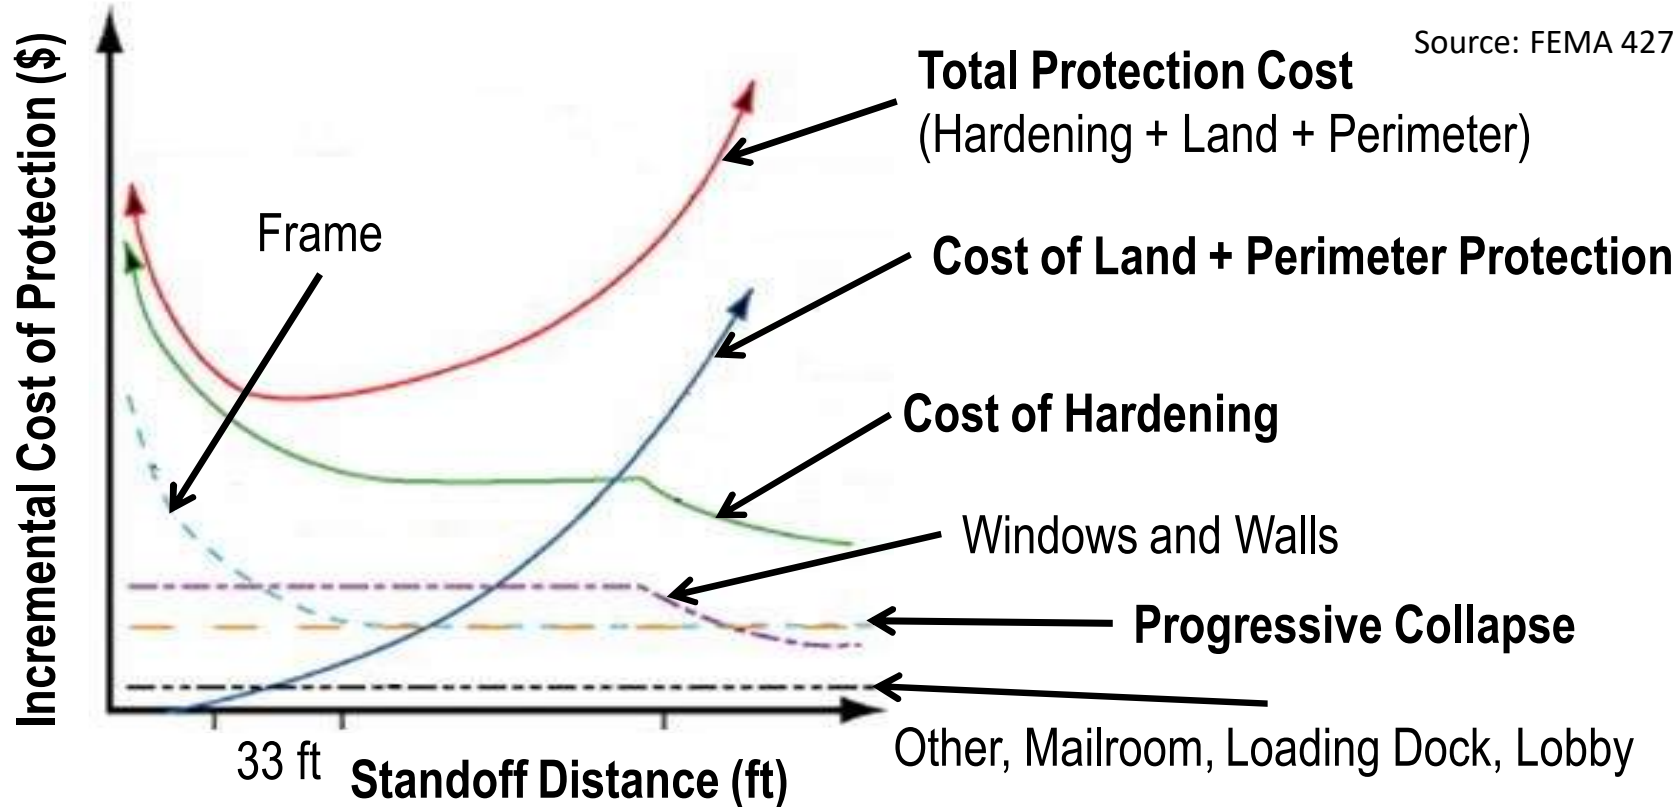

Overhang

- Re-entrant corners can accentuate blast pressures.
- Round shapes can dissipate pressures.
- Berms are ineffective at reducing blast pressures.
- Blast walls can reduce pressures to incident pressures but could accentuate blast pressures.
- Pressure determination may require CFD .

Source: FEMA 427

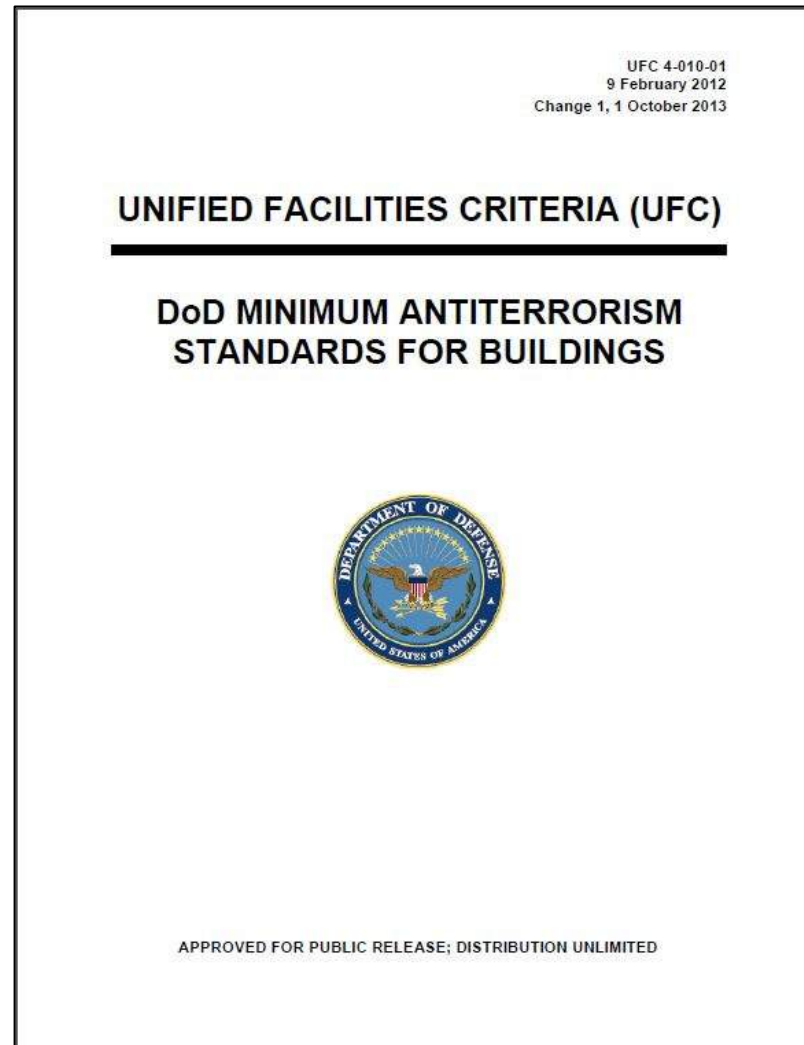

Optimum Standoff

- Optimize total cost of Hardening + Land + Perimeter
 - Less stand-off requires more hardening.
 - More stand-off requires more land and perimeter
 - Note Progressive Collapse is threat independent.

DoD Minimum ATFP Criteria

- DoD Design Criteria
- Combination of performance and prescriptive requirements.
- Simplified graphics and tables.
